Lab Assessment 1

Name: Shri varsha S

Registration number: 23MIS0375

Course title: Agile Development Process and Devops Lab

Slot: L57+L58

Course code: ISWE406P

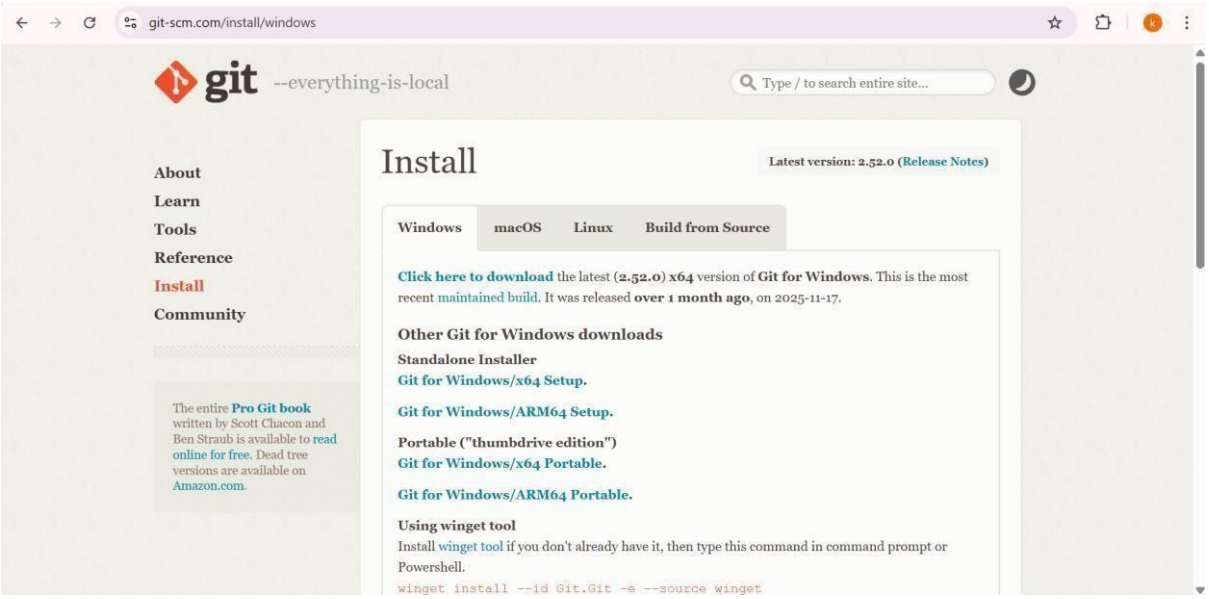
Faculty name: Dr. Ramalingam M

12th Dec,2025 Lab

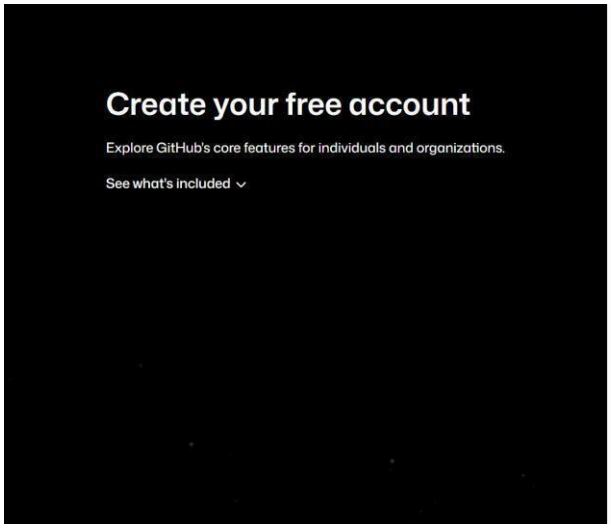
Experiment 1: Develop a simple application (console-based or GUI-based) using any programming language of your choice. Initialize a local Git repository for the project and manage the source code using Git version control. Commit the application source code with proper commit messages and maintain version history. Create a remote repository on GitHub

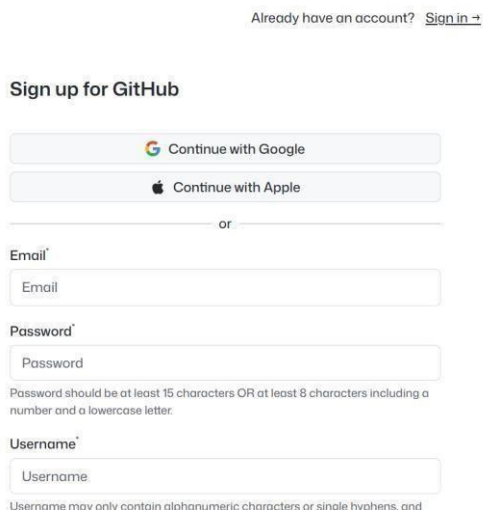
and push the local repository to GitHub. Verify successful hosting by accessing the repository online. Perform branch-related operations by creating at least one feature branch from the main branch, implement a minor enhancement or modification in the feature branch, commit the changes, and merge the feature branch back into the main branch. Resolve any merge conflicts if they arise and push the updated main branch to GitHub.

1.Install Git (for version control)

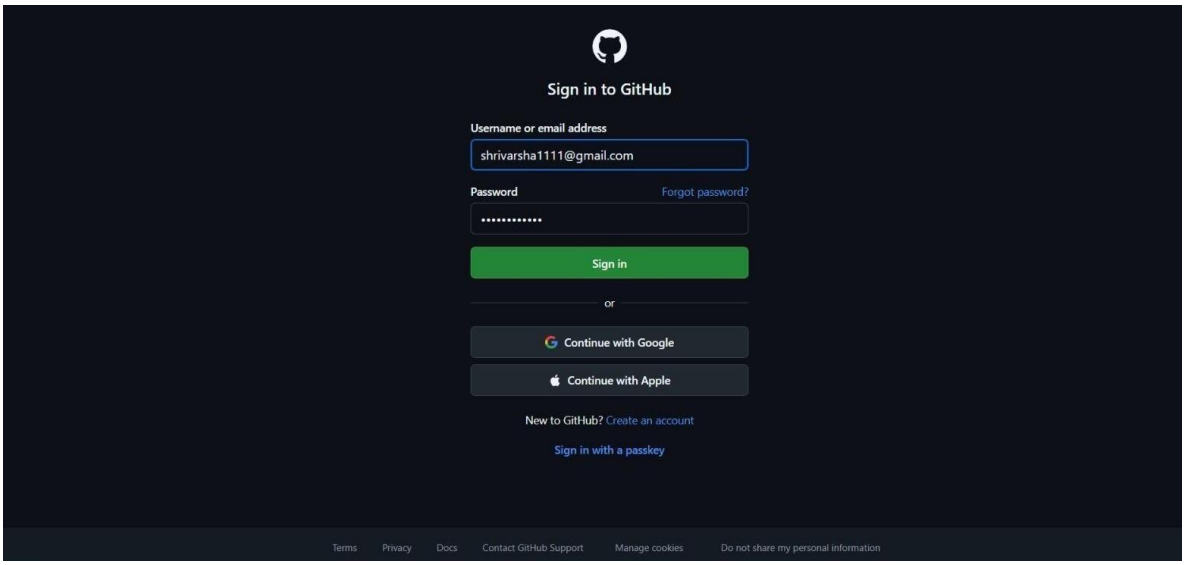


2.Signup to GitHub



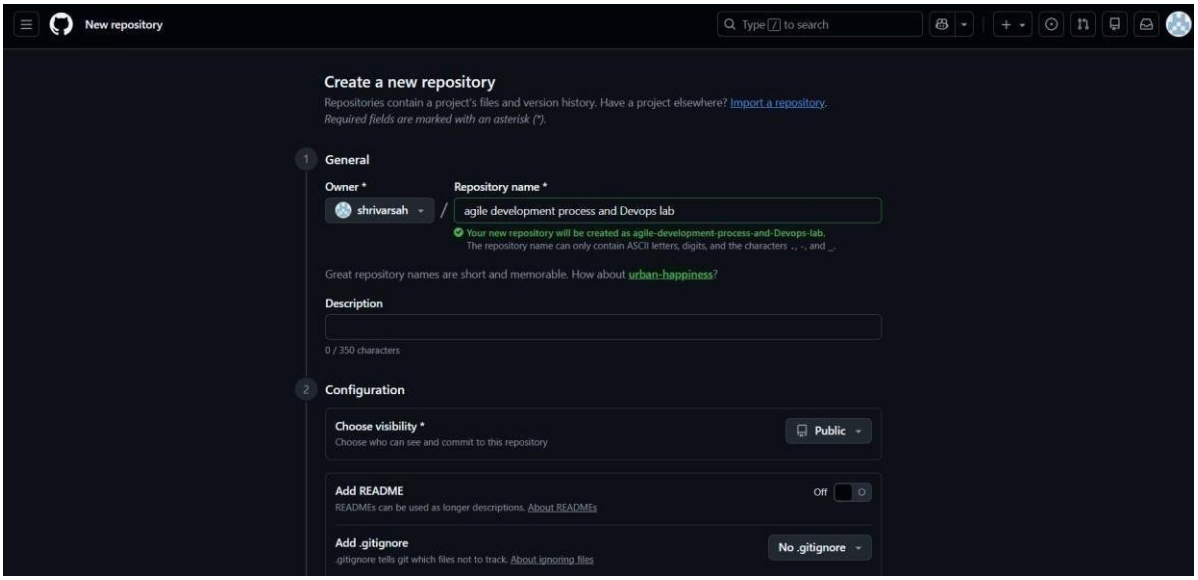


3.Signin to GitHub

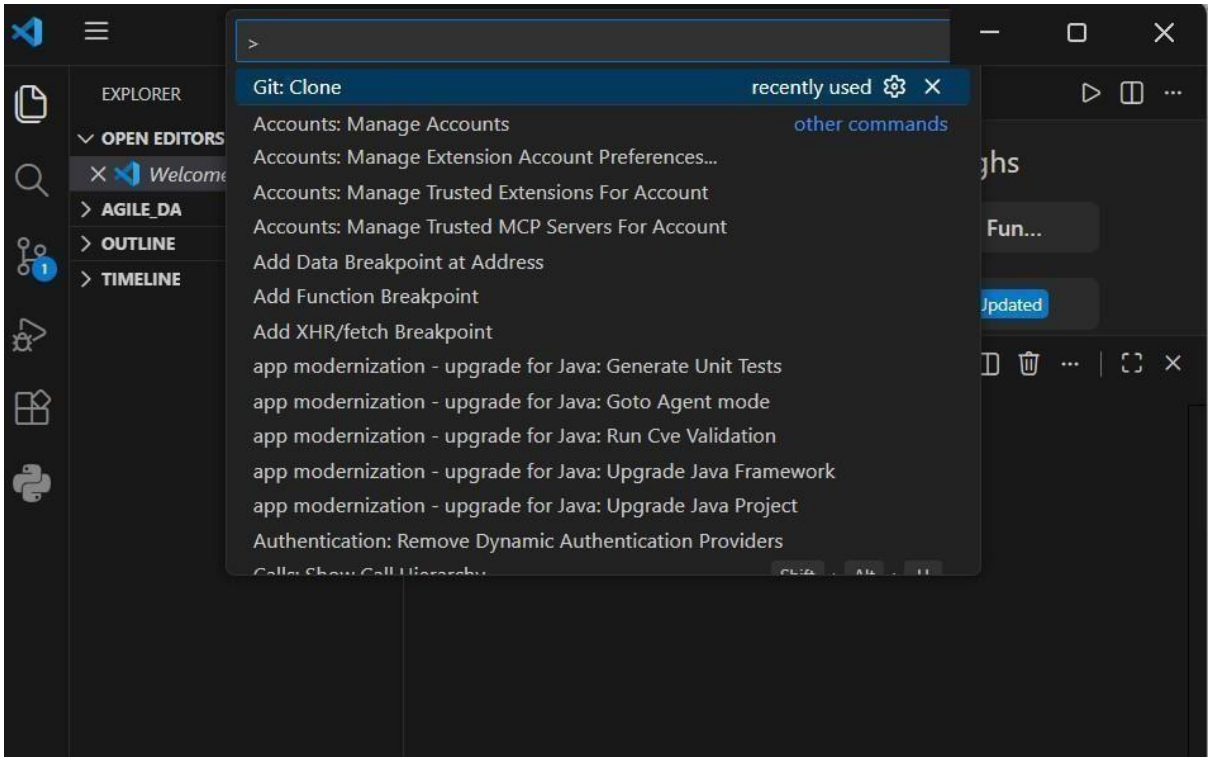


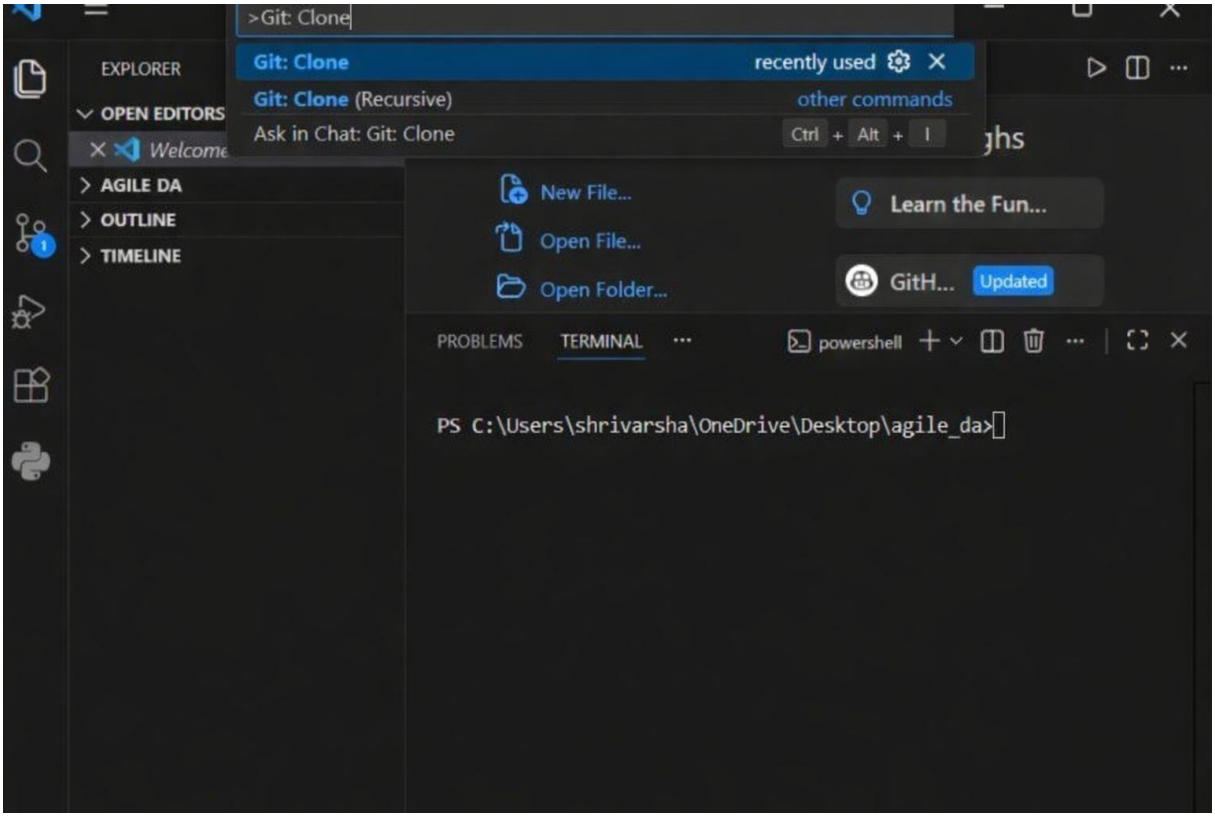
4.Creating Repository

In GitHub Create repository

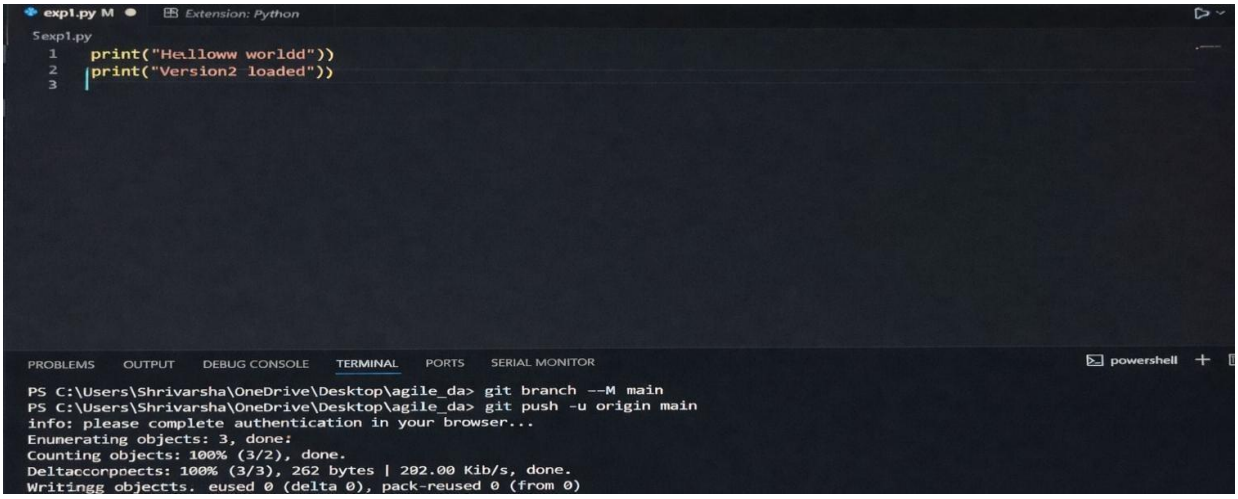


To connect VS code with GitHub Account





Create a file(exp1.py)



Perform these commands to Push Project to GitHub We took Tic

Tac Toe project.

```
PS C:\Users\shrivarsha\OneDrive\Desktop\agile_da> git init
Initialized empty Git repository in C:/Users/shrivarsha/OneDrive/Desktop/agile_da/.git/
PS C:\Users\shrivarsha\OneDrive\Desktop\agile_da> git add
Nothing specified, nothing added.
hint: Maybe you wanted to say "git add .'?
hint: Disable this message with "git config set advice.addEmptyPathspec false"
PS C:\Users\shrivarsha\OneDrive\Desktop\agile_da> git add .
PS C:\Users\shrivarsha\OneDrive\Desktop\agile_da> git commit -m "Version 1 - Initàl exp1"
PS C:\Users\shrivarsha\OneDrive\Desktop\agile_da> git add .
PS C:\Users\shrivarsha\OneDrive\Desktop\agile_da> git commit -m "Version 1 - Initial exp1"
```

```
C:\Users\Shrivarsha\OneDrive\Desktop\agile_da> git branch -M main

C:\Users\Shrivarsha\OneDrive\Desktop\agile_da> git push -u origin main

19th Dec,2025

Lab Experiment 2: Form a team of five members to collaboratively develop a simple application using Git and GitHub. One member shall act as the repository owner, while the

remaining members shall act as collaborators. Create a shared GitHub repository and clone it to all team members' local systems. Each team member must create a separate feature branch from the main branch and modify the same source file by adding their own functionality or contribution. Each collaborator shall commit and push their changes to their respective branches and raise a pull request to the main branch. The repository owner shall review the pull requests, resolve any merge conflicts that arise due to simultaneous modification of the same file, and merge the changes into the main branch. Finally, push the updated main branch to GitHub and verify that the final application includes contributions from all five team members. Document the Git commands used and explain the collaborative workflow followed in the experiment.
